

**Ideation Phase**  
**Define the Problem Statements**

|               |                                  |
|---------------|----------------------------------|
| Date          | 01 October 2026                  |
| Team ID       | SWTID-2026-4498                  |
| Project Name  | Import data using Transform Maps |
| Maximum Marks | 3 Marks                          |

**Customer Problem Statement:**

| <b>Problem Statement (PS)</b> | <b>I am (Customer)</b>                                                     | <b>I'm trying to</b>                                                                                              | <b>But</b>                                                                                                              | <b>Because</b>                                                                                                                    | <b>Which makes me feel</b>                                              |
|-------------------------------|----------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| PS-1                          | A ServiceNow administrator responsible for loading data into the platform. | Import employee, user and asset records from external Excel/CSV files into ServiceNow tables.                     | The data has to be entered manually, record by record, and the source columns do not match the ServiceNow table fields. | There is no automated mapping between the source file and the target table, so errors, duplicates and mismatched values creep in. | Frustrated and worried about data accuracy.                             |
| PS-2                          | A ServiceNow administrator who has set up an Import Set and Transform Map. | Load bulk data accurately and quickly through a Transform Map that maps source fields to the target table fields. | Without field mapping, coalesce and transform scripts, records are duplicated or imported with wrong values.            | Transform Maps now match each source field to its target field and update existing records instead of creating duplicates.        | Confident and relieved that data is clean, consistent and ready to use. |
