Empathy Map – Import data using Transform Maps

Persona: a ServiceNow administrator who needs to import external data into ServiceNow using Import Sets and Transform Maps.

SAYS • “Entering hundreds of records by hand takes too long.” • “Why don't the Excel columns match the ServiceNow table fields?” • “I keep finding duplicate and wrong records after every load.” • “Can this file be loaded automatically in one go?”	THINKS • Manual data entry is slow, repetitive and error-prone. • Data quality problems will affect reports and other ServiceNow modules. • There must be a standard way to map source columns to target fields. • An automated import would save time and give reliable data.
PERSONA ServiceNow Administrator / Data Importer Responsible for loading bulk data from external files into ServiceNow tables accurately and quickly.	
DOES • Prepares Excel/CSV files with the data to be loaded. • Loads the file into a staging (import set) table. • Creates a Transform Map, maps source fields to target fields and sets coalesce on a unique field. • Runs the transform and checks the target table for errors and duplicates.	FEELS • Frustrated by the manual work and mismatched fields. • Anxious about inaccurate or duplicate data. • Relieved when the mapping works and records load correctly. • Confident and satisfied once clean data is in the target table.
