

Project Design Phase-I Customer Journey Map

Date	01 October 2026
Team ID	SWTID-2026-4498
Project Name	Import data using Transform Maps
Maximum Marks	2 Marks

Customer Journey Map:

The map below follows an administrator through the stages of importing data into ServiceNow using Transform Maps, with their actions, touchpoints, thoughts, feelings, process ownership and opportunities to improve each stage.

Phase of Journey	Stage 1 Prepare the data	Stage 2 Load the data	Stage 3 Map the fields	Stage 4 Run the transform	Stage 5 Verify and improve
Actions	- Collect the data in an Excel/CSV file - Clean column names and remove blank rows - Share the file with the administrator	- Create a Data Source and attach the file - Load data to create an Import Set - Open the staging table to check rows	- Create a Transform Map from import set table to target table - Auto map matching fields and map the rest manually - Set a coalesce field	- Run the Transform Map - Wait for the transform to finish - Check inserted, updated and error counts	- Open the target table and check the records - Fix errors and re-run if needed - Save the Transform Map for future imports
Touchpoint	- Excel / CSV file - Email or shared folder	- ServiceNow Data Sources module - Load Data page, Import Set table	- Transform Maps module - Field Maps related list	- Transform Map "Transform" action - Transform History	- Target table list view - Import Log / error report
Customer Thought	"Will my file load without errors?" "Are the column names correct?"	"Did all the rows come into the staging table?"	"Which source field goes to which target field?" "How do I avoid duplicates?"	"Will the records be inserted correctly?"	"Is my data accurate now?" "Can I reuse this for the next file?"
Customer Feeling	Neutral – a little unsure	Hopeful	Concentrated, slightly worried	Anxious while waiting	Relieved, confident and satisfied
Process Ownership	Source Data Owner	ServiceNow Administrator	ServiceNow Administrator	ServiceNow Administrator	Administrator and Business User
Opportunities	- Share a standard file template - Validate the file before loading	- Check the file size and format first - Use scheduled imports for repeat loads	- Use Auto Map to save time - Add a clear naming convention for mappings	- Test with a small file first - Use transform scripts to clean values	- Review the error log after every run - Create a report on imported data
