

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	01 October 2026
Team ID	SWTID-2026-4498
Project Name	Import data using Transform Maps
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Authentication	Users sign in to ServiceNow with their username and password (or company SSO). Only authenticated users can open Data Sources, Import Sets and Transform Maps.
FR-2	Authorization	Administrator (admin / import_admin role): create data sources, import sets and Transform Maps, and run imports. Data Owner / Business User: provide source files and view imported records only. Access to import tables is restricted by roles and ACLs.
FR-3	External Interfaces	Accept external data files (Excel .xlsx / CSV) as the data source, attached to the Data Source record. Optionally pull data through JDBC, REST or other import sources supported by ServiceNow.
FR-4	Transaction Processing	Load file rows into the Import Set (staging) table. Run the Transform Map to insert or update records in the target table. Use a coalesce field to update existing records and avoid duplicates. Record inserted, updated, ignored and error counts for every transform run.
FR-5	Reporting	View the import set, transform history and error log for each import. List and report on the imported records in the target table. Export the imported data or error list to Excel/CSV when needed.
FR-6	Business Rules	Source columns must be mapped to target fields (auto map and manual map). Required fields and valid values are checked during the transform. Transform scripts and field mappings can convert or clean values (e.g., date format, reference lookup). Records that fail validation are skipped and reported without stopping the whole import.
FR-7	Compliance to Laws or Regulations	Imported data must follow the organization's data privacy and retention policy. Personal data is imported only by authorized users and every import is logged for audit.

FR-8	Other	Import can be repeated with the same Transform Map for new data files. Test the import in a sub-production instance before running it in production.
------	-------	---

Non-functional Requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Data Source, Import Set and Transform Map screens are easy for an administrator to use with the standard ServiceNow interface. Target: a new administrator can complete one import in under 30 minutes.
NFR-2	Security	Only users with import roles can import data and data is protected by ServiceNow ACLs and encrypted HTTPS access. Target: 100% of import actions limited to authorized roles.
NFR-3	Reliability	Failed rows are reported and do not affect successfully imported rows; the same import can be re-run safely using the coalesce field. Target: no duplicate records after a re-run.
NFR-4	Performance	The transform loads the staged data into the target table quickly. Target: about 1,000 records imported in less than 1 minute.
NFR-5	Availability	The import runs on the ServiceNow cloud platform whenever the instance is up. Target: 99.9% instance availability per month.
NFR-6	Scalability	The same Transform Map can handle growing data volumes by loading larger files or scheduled imports. Target: supports at least 10,000 records per import.
