

User Acceptance Testing (UAT)

Date	30 September 2026
Team ID	SWTID-2026-4498
Project Name	Import Data using Transform Maps
Maximum Marks	

Project Overview:

Project Name: Import Data using Transform Maps

Project Description: The project demonstrates how to import data from an external data source into a ServiceNow target table using **Import Sets and Transform Maps**. It includes importing data, mapping source fields to target fields, transforming data where required, and validating the imported records.

Project Version: Version 1.0

Testing Period: 28 September 2026 to 01 October 2026

Testing Scope

Features and Functionalities to be Tested

- Importing data from an external source.
- Creating and processing an Import Set.
- Creating and configuring a Transform Map.
- Mapping source fields to target fields.
- Applying field transformations.
- Importing records into the target table.
- Validating imported records.
- Identifying and handling import errors.

User Stories / Requirements to be Tested

- **US-01:** As an administrator, I can import data into ServiceNow.
- **US-02:** As an administrator, I can create a Transform Map to map source and target fields.
- **US-03:** As an administrator, I can transform source data before inserting it into the target table.
- **US-04:** As an administrator, I can verify that imported records are correctly created in the target table.

Testing Environment

URL/Location: ServiceNow Personal Developer Instance (PDI) [
<https://developer.servicenow.com/dev.do>]

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Import source data	1. Open Import Sets 2. Select the data source 3. Upload the data file	Source data should be uploaded successfully	Data uploaded successfully	Pass
TC-002	Create Import Set	1. Open Import Set 2. Select the imported data 3. Submit the Import Set	Import Set should be created successfully	Import Set created successfully	Pass
TC-003	Create Transform Map	1. Open Transform Maps 2. Create a new Transform Map 3. Select source and target tables	Transform Map should be created successfully	Transform Map created successfully	Pass
TC-004	Configure field mapping	1. Open Transform Map 2. Map source fields to target fields 3. Save the mapping	Source fields should map correctly to target fields	Fields mapped correctly	Pass
TC-005	Execute transformation	1. Run the Transform Map 2. Wait for transformation to complete	Source data should be transformed and inserted into the target table	Records transformed successfully	Pass
TC-006	Verify target records	1. Open the target table 2. Search for imported records	Imported records should contain correct values	Records verified successfully	Pass

		3. Compare values with source data			
TC-007	Test invalid data	1. Import a record with missing/invalid data 2. Run the Transform Map	Invalid data should be identified or rejected appropriately	Invalid data identified	Pass
TC-008	Verify import errors	1. Open Import Set Run history 2. Check the error information	Import errors should be displayed for unsuccessful records	Error information displayed correctly	Pass

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	One source field was not mapped to the correct target field	1. . Open Transform Map 2. Check Field Maps 3. Run transformation	Medium	Closed	Field mapping was corrected
BG-002	Invalid source data caused a transformation error	1. Import invalid data 2. Run Transform Map 3. Check Import Set Run	Low	Closed	Field mapping was corrected
BG-003	Some records were not imported because of missing mandatory data	1. Import incomplete records 2. Run transformation 3. Check target table	Medium	Closed	Mandatory field values were provided
