

Scalability & Future Plan

Date	01 October 2026
Team ID	SWTID-2026-4498
Project Name	Import data using Transform Maps
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger data loads, more users and extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	The import is started manually by the administrator each time a new file arrives.	Delays and extra manual effort for repeat loads.	High
2	Only Excel/CSV files are used as the data source.	Data from databases or other systems cannot be loaded directly.	Medium
3	Very large files take longer to load and transform, and validation relies on basic field maps and scripts.	Slow imports and some bad records reach the error log.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	One administrator runs imports on a single instance.	Give import roles to more administrators and data owners; use scheduled imports so many users can supply files without waiting.
2	Data Storage	Records are stored in the import set and target tables on the ServiceNow instance.	Clean up old import sets regularly, archive old records, and extend the Transform Map to more target tables.
3	Performance	Small and medium files are transformed in one run.	Split very large files into batches, use an indexed coalesce field and efficient transform scripts, and run imports in off-peak hours.
4	Security	Role-based access and ACLs protect the import tables.	Add stricter roles for import, data validation rules, audit logging and encryption for sensitive fields.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Scheduled imports from Excel/CSV files and e-mail notification on success or errors.	Q4 2026	Less manual work and faster feedback on import results.

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 3	Import from other sources (REST APIs, JDBC databases) and support for multiple target tables.	Q1 2027	Wider data coverage and fewer manual file transfers.
Phase 4	Data quality dashboard and reports on import history, plus reusable transform scripts and templates.	Q2 2027	Better data accuracy, easier monitoring and faster setup of new imports.
