Team ID	SWTID-2026-4498
Project Title	Import data using Transform Maps
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to simplify and automate data loading in ServiceNow using Import Sets and Transform Maps, boosting efficiency and accuracy. It tackles the inefficiencies of manual data entry, promising better operations, fewer errors, and happier users. Key features include automated field mapping and reliable, repeatable data imports.

Project Overview	
Objective	The primary objective is to automate the import of external data (Excel/CSV) into ServiceNow tables using Import Sets and Transform Maps, ensuring faster and more accurate data loading.
Scope	The project covers creating a Data Source, loading data into an Import Set (staging) table, building a Transform Map with field mappings, coalesce and scripts, running the transform, and verifying the records in the target table.

Problem Statement	
Description	Manually entering large amounts of external data into ServiceNow is slow and error-prone, and source columns do not match the target table fields, leading to duplicate, missing or inconsistent records.
Impact	Solving this will save time, reduce data errors and duplicates, and give users accurate, consistent data, contributing to better reports, operations and user satisfaction.

Proposed Solution	
Approach	Use ServiceNow Import Sets and Transform Maps to import external data, map source fields to target fields, transform and clean the values, and load the records into the target table.
Key Features	- Automated field mapping between the import set table and the target table. - Coalesce field to update existing records and avoid duplicates. - Transform scripts to clean and convert values during import. - Transform history and error log to track and fix failed rows. - Reusable Transform Map for repeat and scheduled imports.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		

Computing Resources	CPU/GPU specifications, number of cores	Standard laptop/PC (Intel i3 or above, 4 cores); no GPU needed. The ServiceNow instance runs on the ServiceNow cloud.
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	256 GB SSD (source files and documents); instance storage managed by ServiceNow
Software		
Frameworks	Platform / frameworks	ServiceNow Now Platform (Personal Developer Instance), Import Sets, Transform Maps
Libraries	Additional libraries / APIs	Glide API (GlideRecord) and JavaScript for transform scripts
Development Environment	IDE	ServiceNow Platform UI (Next Experience), Microsoft Excel, web browser (Chrome / Edge)
Data		
Data	Source, size, format	Sample external records prepared in Excel / CSV (.xlsx, .csv) and loaded into ServiceNow tables

Project Design Phase Proposed Solution Template

Project Name	Import data using Transform Maps
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Importing large amounts of external data manually into ServiceNow is time-consuming and can result in data entry errors and inconsistencies.
2.	Idea / Solution description	Use ServiceNow Import Sets and Transform Maps to import external data, map the fields, transform the data, and load it into the required target table.
3.	Novelty / Uniqueness	Provides an automated data transformation and mapping process that reduces manual effort and improves data accuracy.
4.	Social Impact / Customer Satisfaction	Saves time, reduces errors, and provides users with accurate and consistent data.
5.	Business Model (Revenue Model)	Can generate revenue through ServiceNow implementation, customization, data migration, and maintenance services.
6.	Scalability of the Solution	Can handle larger datasets and can be extended to multiple tables, data sources, and scheduled imports.
