

Project Design Phase Solution Architecture

Date	01 October 2026
Team ID	SWTID-2026-4498
Project Name	Import data using Transform Maps
Maximum Marks	5 Marks

Solution Architecture Diagram:

High-level view of the solution showing the Presentation Layer, Application Layer and Data Layer for importing data into ServiceNow using Transform Maps.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Web interface where the administrator creates the Data Source, uploads the file, builds the Transform Map and runs the transform.	ServiceNow Now Platform UI (Next Experience), HTML / JavaScript, web browser
Gateway / Access Layer	Receives user requests securely and routes them to the ServiceNow instance.	ServiceNow web servers and load balancer, HTTPS / TLS
Auth Service	Controls who can log in and who can import data or view import tables.	ServiceNow authentication, roles, ACLs
Core Logic Service (Application Services)	Loads the file into the Import Set, maps source fields to target fields, applies coalesce and transform scripts, and runs the transform.	Data Source, Import Sets, Transform Map, Field Maps, JavaScript (Glide API)
External Integrations	Provides the source data and optional outputs: Excel/CSV file, optional REST / JDBC data source, optional e-mail notification and scheduled import.	Excel / CSV, REST / JDBC (optional), E-mail notification, Scheduled Import
Database	Stores the raw staged rows, the final records and the transform history and error log.	ServiceNow platform database – Import Set table, Target table, Transform History

Data Import Flow (ServiceNow):
